

DELTA MAGNETIC WATER CONDITIONERS

These units are designed and made in Australia.

HOW DOES IT WORK?

The Delta Magnetic Water Conditioner focuses a very intense magnetic field through the pipe wall into the water or fluid to be treated.

The very strong and intense magnetic field within the Delta causes the water molecules to loosen. This creates a reduction in the surface tension of the water. This change results in the water acting "softer".

WHAT DOES A DELTA MAGNETIC WATER CONDITIONER DO?

Due to the water acting "softer" after the Delta, soaps, detergents and cleaning chemicals perform more efficiently, as a result less is required.

WITH CALCIUM

Water is the greatest solvent known. Wherever it goes it dissolves "small particles" of everything it contacts. Two of the most common minerals dissolved are calcium and magnesium. These dissolved minerals go on to redeposit on pipes, hot water systems, household appliances and any other surface the water may come in contact with, building up a "limescale".

This "limescale" in industry reduces efficiency of equipment, increases fuel requirements and increases maintenance time and costs. Maintaining scale free surfaces allows maximum heat transfer and utilization of equipment. In other areas this "limescale" build up reduces the interior diameter of the pipe leading to inefficiency, blockage, and even total destruction of the pipe or appliance. The Delta prevents "limescale" building up in household appliances that use water and surfaces like tiles, sinks and glass, etc.

**Delta Magnetic Water Conditioners prevent
this behavior with the use of Magnetics.**

Magnetics is a superior, proven environmentally safe, non-chemical approach to the treatment of fluids. The cost of chemicals used to control scale and corrosion in most cases can be totally eliminated.

WITH IRON

Installation of a Delta Borehole Conditioner will keep submersible pumps free of Iron build up, eliminating the necessity of having to pull the pump up for cleaning, in some cases up to three times a year.

Delta Magnetic Water Conditioners will stop iron build up in pipelines, micro and drip irrigation equipment, stop the staining of plants and in some cases decrease staining of buildings and fences.

WITH SALINITY

Trials are showing the Delta Magnetic Water Conditioner will prevent leaf burn, reduce sodium and chloride build up in plant tissue and reduce sodium and chloride build up in soil.

WATER CONDITIONER PRICING AND SPECIFICATIONS

You need to select the unit on the pipe sizing to match your water piping.

MODEL	PIPE SIZE		TYPE	WEIGHT	LENGTH	DIA.	RRP [†]
	Mm	Inch					Incl. GST
CU-IN12	12.5	1/2	Clamp On	650 g	100mm	75mm	Please contact us for current pricing – or check our website.
CU-IN20	20	3/4	Clamp On	1.5 kg	150mm	90mm	
CU-IN25	25	1	Clamp On	2.1 kg	170mm	100mm	
CU-IN32	32	1 1/4	Clamp On	3.1 kg	190mm	115mm	

Some pricing available at www.bestwaterfilters.com.au/store.

INSTALLATION

The Delta Magnetic Water Conditioner comes in two halves, which are screwed together. These two halves simply clamp on around the pipeline. It is best fitted into the main line after the water meter of pump and before any tee junctions, whereby the whole system will benefit.

The very strong and intense magnetic field within the Delta causes the water molecules to loosen. This creates a reduction in the surface tension of the water. This change results in the water acting "softer".

MAINTENANCE

The Delta Magnetic Water Conditioner does not require any maintenance. You simply install the unit and forget about it. It never has to be replaced.

GUARANTEE & WARRANTY

GUARANTEE

Money Back Guarantee - The Delta Magnetic Water Conditioner comes with a 120 day Money Back Guarantee. (To take advantage of this Money Back Guarantee, the Delta Magnetic Water Conditioner must have been installed for a period of 90-day continuously. Proof of date of installation is required, as a continuous 90-day installation period is required for the Delta Magnetic Water Conditioner benefits to be experienced.)

25 Year Magnet Guarantee - Covers the ability of the permanent magnets used in the Delta. (The manufacturer of the permanent magnets used states the magnets will loose only 5% of their power in 100 years.)

WARRANTY

3 Year Manufacturers Warranty - Covers the unit manufacturing faults for a period of three years from date of purchase to the original purchaser.

MANY SIZES TO CHOOSE FROM

In addition to the sizes listed in the specifications above, there are also flanged models available for larger piping. These require cutting into the water line. These flanged models are for up to 300mm (12") size piping. Prices are supplied on enquiry.
